Hariharan T

Erode – hariharan10202@gmail.com - +91 9360709021 – in/Hariharan-t-1447ba210 – Github - Leetcode - Portfolio

Software Engineer | 3.5+ years experience building scalable web apps with **React, Next.js, Node.js & TypeScript**. Strong in **data structures, algorithms**, and **scalable system design**; delivered **production-ready features** for **high-traffic platforms**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python
Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS, Redux
Backend: Node.js, Express, Fast API, REST APIs, tRPC
Databases: MySQL, MongoDB**.**

PROFESSIONAL EXPERIENCE

Software Engineer - Oddworks (Indieworks) Solutions | January 2024 – January 2026

Stack: React, Next.js, TypeScript, Tailwind, Recharts, Context API, Node.js, Prisma, tRPC, PostgreSQL, Git

- Built and scaled **multiple production platforms** (Health Dashboard, Talent Hiring, eCommerce/POS) serving 5K+ MAU, delivering end-to-end features across frontend and backend.
- Developed **interactive data dashboards** visualizing client health metrics with dynamic widgets, time-based filters, and goal tracking systems to improve user insights and engagement.
- Engineered **scalable frontend architectures** in a Turborepo monorepo with reusable UI components, while managing state and ensuring seamless, type-safe data syncing using tRPC.
- Built full-page **calendar UI from scratch for appointment management**, enabling slot rendering, create/edit flows, and seamless API-driven data updates.
- Built the **end-to-end eCommerce platform (frontend + backend)**, implementing product listing, pagination vs infinite scroll, CRUD operations, and integrating APIs with tRPC.

Key Achievement: Drove the end-to-end development of **multiple production platforms**, delivering scalable dashboards, scheduling, and eCommerce systems while improving performance and feature delivery speed by ~20%.

Software Engineer - Freightify | July 2022 – December 2023

Stack: HTML, CSS, SASS, React, Next.js, TypeScript, Tailwind, Redux, Git

- Designed and built a **scalable Design System from scratch** (HTML, CSS, JavaScript) to standardize UI across applications, eliminating inconsistencies and reducing development time by ~30–40%.
- Developed and documented a **full-fledged component library**, published via Storybook for internal adoption, enabling consistent and reusable UI across teams.
- Led a **Next.js Server Components PoC**, migrating heavy client-side data fetching to the server, reducing frontend bundle size and improving page load performance by ~30–40%.
- Optimized data handling by **aggregating and structuring multiple external API responses on the server**, reducing client-side complexity and improving rendering efficiency.
- Built and migrated **core reusable React UI components** during a major product revamp, and introduced improved layout patterns to enhance data readability and scalability.

Key Achievement: Spearheaded a **custom Design System and Server Components initiative**, reducing UI development time by ~40% and significantly improving frontend performance by shifting heavy data processing to the server.

PROJECTS

AlignAI - AI Resume–JD Alignment Engine - view

Stack: Python, FastAPI, LLM, React, Next.js.

- Built AI-powered resume–JD matching system using **LLM**, generating explainable match scores and skill-gap insights.
- Developed **FastAPI** services for document ingestion, text extraction, scoring logic, and recruiter-ready outputs.

EDUCATION

Bachelor of Computer Science and Engineering | **Kongu Engineering College** | ***GPA: 8.1***
